

SINLOIHI COLOR

FX Series

SINLOIHI COLOR FX-300 Series is spherical-type pigment that provides excellent physical properties such as high heat stability, strong solvent stability, and very limited migration of dyes. With these excellent physical properties, which are difficult to find in most ordinary types of fluorescent pigments, the FX-300 Series can be used in such applications as coloring different types of plastics such as olefin, and for formulating powder coatings. The dispersion properties of this series is excellent because the particle size is relatively uniform, and the workability, for instance easy color changes in injection machines is possible.

FX-300 Series is also suitable for many other applications such as solvent-based and water-based paints, inks, and silk screen printing ink.

•Color Availability

FX-301 Red Orange

FX-303 Red

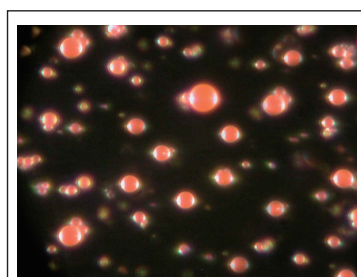

FX-304 Orange

FX-305 Lemon Yellow

FX-306 Orange Yellow

FX-307 Pink

FX-327 Magenta

•Properties

Average particle size	3.0~4.0 μ m
Softening Point	not applicable
Heat stability	280°C(at injection molding)
Solvent stability	This product is indissolubility to all organic solvents.

Package:paper bag
Net weight:10kgs
